```

## Sampling Frame

### Download the data

```
# file path to csv with addresses
aru_file_path <- "https://opendata.arcgis.com/datasets/c3c0ae91dca54c5d9ce56962fa0dd645_
ap_file_path <- "https://opendata.arcgis.com/datasets/aa514416aaf74fdc94748f1e56e7cc8a_0

# create a directory for downloading the data
if (!dir.exists("data/")) {
  dir.create("data")
}

# if the data doesn't already exist, download the data
if (!file.exists("data/aru.csv")) {
  download.file(aru_file_path, "data/aru.csv")
}

if (!file.exists("data/ap.csv")) {
  download.file(ap_file_path, "data/ap.csv")
}
```

### Address Residential Units

The first dataset is Address Residential Units

The dataset does not contain a variable for quadrant, so we extract quadrant from the full address.

```
aru <- read_csv("data/aru.csv") %>%
  rename_all(tolower) %>%
  select(unit_id, address_id, fulladdress, status, unitnum, unittype)

# extract quadrant
aru <- aru %>%
  mutate(quadrant = str_sub(fulladdress, start = -2, end = -1))
```

Address Residential Units contains residential units with status set to “RETIRED”. We drop these cases as well.

```
count(aru, status) %>%
  kable()
```

status	n
ACTIVE	244046
ASSIGNED	47
RETIRE	7087

```
aru <- aru %>%
  filter(status != "RETIRE")
```

## Adress Points

```
# load the data and convert the variable names to lower case
ap <- read_csv("data/ap.csv", guess_max = 10000) %>%
  rename_all(tolower) %>%
  select(address_id, status, type_, entrancetype, quadrant, fulladdress, objectid_1, ass
```

Address Points contains residential units, non-residential units, and mixed-use units. Residential units and mixed-use units contain residences that belong to our sampling frame. We drop non-residential units.

```
count(ap, res_type) %>%
  kable()
```

res_type	n
MIXED USE	473
NON RESIDENTIAL	15807
RESIDENTIAL	131370

```
ap <- ap %>%
  filter(res_type != "NON RESIDENTIAL")
```

Address points contains residential units with status set to “RETIRED”. We drop these cases as well.

```
count(ap, status) %>%
  kable()
```

status	n
ACTIVE	128490
ASSIGNED	668

status	n
RETIRE	2675
TEMPORARY	10

```
ap <- ap %>%
  filter(status != "RETIRE")
```

After the above filtering, there are 98 observations from Address Points and 3,706 observations in Address Residential Units that have missing addresses. We investigated joining the two datasets on `address_id` to fill in the address but all records missing an address in one dataset were missing an address in the other dataset.

We dropped the missing values which represented about 1.5 percent of observations in Address Residential Units and 0.07 percent of observations in Address Points.

```
ap <- ap %>%
  filter(!is.na(fulladdress))
```

```
aru <- aru %>%
  filter(!is.na(fulladdress))
```

```
missing_aru <- filter(aru, is.na(fulladdress))
```

```
# join ap to aru missing
```

```
missing_aru <- left_join(missing_aru, ap, by = "address_id")
```

```
anti_join(missing_aru, ap, by = "address_id")
```

```
## # A tibble: 0 x 27
## # ... with 27 variables: unit_id <dbl>, address_id <dbl>,
## #   fulladdress.x <chr>, status.x <chr>, unitnum <chr>, unittype <chr>,
## #   quadrant.x <chr>, status.y <chr>, type_ <chr>, entrancetype <chr>,
## #   quadrant.y <chr>, fulladdress.y <chr>, objectid_1 <dbl>,
## #   assessment_nbhd <chr>, cfsa_name <chr>, census_tract <chr>,
## #   vote_prcnct <chr>, ward <chr>, zipcode <dbl>, anc <chr>,
## #   census_block <chr>, census_blockgroup <chr>, latitude <dbl>,
## #   longitude <dbl>, active_res_unit_count <dbl>, res_type <chr>,
## #   active_res_occupancy_count <dbl>
```

```
count(missing_aru, fulladdress.y)
```

```
## # A tibble: 0 x 2
## # ... with 2 variables: fulladdress.y <chr>, n <int>
```

```

missing_ap <- filter(ap, is.na(fulladdress))

missing_ap <- left_join(missing_ap, aru, by = "address_id")

anti_join(missing_ap, aru, by = "address_id")

## # A tibble: 0 x 27
## #   ... with 27 variables: address_id <dbl>, status.x <chr>, type_ <chr>,
## #     entrancetype <chr>, quadrant.x <chr>, fulladdress.x <chr>,
## #     objectid_1 <dbl>, assessment_nbhd <chr>, cfsa_name <chr>,

count(missing_ap, fulladdress.y)

## # A tibble: 0 x 2
## #   ... with 2 variables: fulladdress.y <chr>, n <int>

# merge using address id

```

## Merge variables

Address Points has interesting variables not present in Address Residential Units. So we merge the Address Points dataset with the Address Residential Units dataset. The join works for all but 572 cases, most of which are in a new building at the Wharf.

```

aru_expanded <- aru %>%
  select(-status) %>%
  left_join(ap, by = c("fulladdress", "address_id")) %>%
  select(quadrant = quadrant.x, everything(), -quadrant.y)

anti_join(aru, ap, by = c("fulladdress", "address_id"))

## # A tibble: 572 x 7
##   unit_id address_id fulladdress      status unitnum unittype quadrant
##   <dbl>     <dbl> <chr>          <chr>  <chr>  <chr>    <chr>
## 1  223379     276680 600 WATER STREET SW ACTIVE 6-12   RENTAL SW
## 2  223380     276680 600 WATER STREET SW ACTIVE 6-13   RENTAL SW
## 3  223381     276680 600 WATER STREET SW ACTIVE 6-14   RENTAL SW
## 4  223384     276680 600 WATER STREET SW ACTIVE 1-1    RENTAL SW
## 5  223389     276680 600 WATER STREET SW ACTIVE 1-6    RENTAL SW

```

```

## 7 223494      276680 600 WATER STREET SW ACTIVE 8-16    RENTAL  SW
## 8 223497      276680 600 WATER STREET SW ACTIVE 9-3     RENTAL  SW
## 9 223503      276680 600 WATER STREET SW ACTIVE 9-9     RENTAL  SW
## 10 223508     276680 600 WATER STREET SW ACTIVE 9-14    RENTAL  SW
## # ... with 562 more rows
```

## Combination

Next, we need to drop addresses in the Address Points dataset that exist in the Address Residential Units dataset so we don't overcount addresses in multi-dwelling units.

```
ap <- ap %>%
  filter(!address_id %in% unique(aru_expanded$address_id))
```

Finally, we can combine the two datasets to create a sampling frame that contains approximately every residential address in Washington D.C.

```
sampling_frame <- bind_rows(ap, aru_expanded)

#summarize_all(addresses, list(~sum(is.na(.))))

write_csv(sampling_frame, "sampling_frame.csv")

filter(aru, str_detect(fulladdress, "1930 NEW HAMPSHIRE"))
```

```
## # A tibble: 49 x 7
##   unit_id address_id fulladdress      status unitnum unittype quadrant
##   <dbl>    <dbl> <chr>          <chr> <chr>    <chr>    <chr>
